A The curves look alike; the sizes differ
CdCa, 23 atoms: L2 diff 2.6 %
PbB, 48 atoms: L2 diff 3.1 %
intensity / max (curves shifted)
theta (deg)
saved earlier scan
our LU, same cluster
B 84 cases agree to ~1e-6; 13 do not
flag level 1e-4
L2 difference, our LU vs earlier scan
97 cases, sorted
C The flagged cases already differ before any solve
"1e-8" = identical
difference of the full scan
difference of the direct signal (no multiple scattering)
D A rounding-size shift gives the same size of change
change of our own LU scan
